February 27th, 2026

Dear Water Customer,

The Village of Donnellson is *required* to implement an active cross-connection control program. A cross connection is any situation that allows a potable (safe) water source and a non-potable (contaminated) water source the opportunity to encounter each other. The Illinois Environmental Protection Agency and the Illinois Department of Public Health are responsible for ensuring that cross-connections do not occur through the enforcement of cross-connection control regulations. A cross-connection between potable and non-potable water sources may cause anything from contamination of plumbing to sickness and even death in consumers.

The first step in implementing an approved program is the passage of an ordinance that is then submitted for approval by the IEPA. This ordinance has been passed and approved by the IEPA.

The second step in the program is a survey of all customers served by our public water supply. On the back of this page is a survey that you must complete and return to the Village of Donnellson in the enclosed stamped return envelope by **March 15th, 2026**. Simply mark all plumbing fixtures that you have in your home or business. If you have other fixtures that are not listed, please mark in the "Other" spaces. After we receive your survey, we will review the data and determine if an inspection of your plumbing is needed. If it requires an inspection, you will be notified by mail.

These surveys are required by the Village of Donnellson and must be completed. If the Village does not receive your completed survey by the above-stated date the Village will turn off your water until a cross-connection inspection is completed.

We thank you for your cooperation in this matter. If you have any questions, please don't hesitate to call.

Sincerely,

Bill Grider, Operator
